Professional Summary

Aspiring AI/ML Engineer and AI Engineer with a strong foundation in Python, machine learning, and end-to-end ML pipelines (EDA, preprocessing, training, evaluation, deployment) using Scikit-learn, XGBoost, and TensorFlow. Built production engineering experience as a Python Developer Intern at Novok an AI-driven email-automation pipeline (Gmail API, Gemini AI), a concurrent web-scraping tool, and a local NLP system covering multilingual speech transcription and a multi-modal Retrieval-Augmented Generation (RAG) assistant. Currently deepening expertise in NLP, LLMs, and RAG architectures to build scalable, real-world AI solutions.

Technical Skills

- **Programming:** Python, JavaScript, SQL, HTML, CSS
- **Machine Learning & Data:** Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib, Seaborn, TensorFlow
- **AI / NLP Tooling:** faster-whisper, pyannote (speaker diarization), RAG
- **Backend & Deployment:** FastAPI, Streamlit, REST API Integration, asyncio, httpx
- **DevOps & Cloud:** Git, GitHub, Docker, AWS, PyInstaller

Experience

Python Developer Intern (Novok)

July 2026 – September 2026

- Built a Python automation pipeline integrating the Gmail REST API and Google's Gemini AI to parse incoming business emails and attachments and push structured records into Zoho Creator the email ingestion around a blocked IMAP port by switching to the Gmail REST API over HTTPS.
- Built a concurrent Python web-scraping tool (httpx, 10 parallel workers) to extract BNI chapter member directory data with staged atomic output, and learned to package it as a standalone Windows desktop app by wrapping a Streamlit UI in pywebview and building it with PyInstaller.
- Built a local-first, Multilingual audio-to-English transcription pipeline using faster-whisper (large-v3) with noise reduction, VAD filtering, and pyannote-based speaker diarization, and extended it into a multi-modal RAG assistant (LangGraph, Qdrant, local LLM) for PDF, audio, and video Q&A.

Web Development Intern (Webshopify)

Jan 2024 – March 2024

- Developed and maintained the front-end interface using HTML, CSS, JavaScript, and Bootstrap to ensure a responsive, user-friendly design.
- Collaborated with the team to implement product listing, cart, and shipping features, improving overall customer experience.
- Gained hands-on experience in web performance optimization and problem-solving during project execution.

Projects

Multiple Disease Prediction Web Application

- Built an end-to-end Multiple Disease Prediction web application using Python and Streamlit for real-time healthcare analytics.
- Developed Diabetes and Heart Disease classification models and a Calories Burn regression model using XGBoost and Scikit-learn, applying data preprocessing, feature engineering, and hyperparameter tuning to reach 75–85% model accuracy.
- Deployed the application on Streamlit Cloud with an interactive multi-page UI for real-time predictions.

Self-Hosted AI

- Developed a privacy-focused local AI assistant using Ollama, open-source LLMs, RAG, and vector search for context-aware responses and document-based knowledge retrieval.
- Built automated communication workflows for email, enabling AI-driven message processing and personalized automated replies.
- Implemented a modular Python architecture with FastAPI, enabling local deployment and scalable AI automation.

Education

B.E. Computer Science — St. Peter's College of Engineering and Technology (CGPA: 7.2)

2022 – 2026

Higher Secondary — Sri Ramakrishna Vidyalaya Matriculation HR SEC School (84%)

2022

Certifications

- **AWS – Cloud Computing Certification:** cloud services, deployment, and infrastructure management on AWS
- **Codetantra – Python Programming Certification:** Python basics, data handling, problem-solving techniques
- **Digilabs – JavaScript Certification:** JavaScript fundamentals, DOM manipulation, interactive web development
- **MongoDB Certification –** NoSQL databases, CRUD operations, and data modeling using MongoDB
